Visa - 'TWW niet vereist'

## PROFILE

After working for more than 4 years solving Business challenges, I completed accelerated boot-camp to switch career to align with my enthusiasm for technology. Now, my focus is to use that knowledge to make useful and high quality applications that help solve problems. I am looking for a role as web developer for a company that provides a mix of challenge and opportunity. I am a conceptual thinker with ability to break down a complex problem. This belief was helped by me **winning the HERE Technologies Hackathon** held in Eindhoven in June 2019 where we came up with winning solution for a real world problem

## WORK EXPERIENCE

### Codaisseur - Full stack Developer Trainee Invoice/Warranty manager

A full stack application that is an online Warranty management application to keep your appliance Invoices/warranties safe and get custom notifications about their expiration using React, Express, Postgres, REST API, Bootstrap, nodemailer, Docker, JWT
